**NOTICE OF MOTION AND MOTION**

PLEASE TAKE NOTICE that on August 31, 2023, at 2:00 p.m., or as soon as the matter may be heard, in Courtroom 6 (2nd Floor) of the above-captioned Court,<sup>1</sup> Defendants will and hereby do move for an Order precluding Plaintiffs (or “Rearden”) from introducing evidence or argument at summary judgment or trial related to a theory that DD3 infringed copyright by allegedly copying “Maya Script” files. Plaintiffs did not plead this “Maya Scripts infringement” theory, and Plaintiffs did not disclose it as an infringement theory until they served their expert reports, months after the close of fact discovery.

Defendants make this motion pursuant to Federal Rules of Civil Procedure 8, 15, 26, and 37 and Federal Rule of Evidence 402. This Motion is based on this Notice of Motion and Motion; the Memorandum of Points and Authorities; the Declarations of Kelly M. Klaus and Stephen H. Lane; all pleadings on file; and any other document or argument submitted at or prior to the hearing on this Motion.

**MEMORANDUM OF POINTS AND AUTHORITIES**

Defendants move to preclude Rearden from introducing a completely new theory of copyright infringement that Rearden raised for the first time after the close of fact discovery. Rearden’s new infringement theory is based on the alleged copying of various script lines in Maya files (“Maya Scripts”). Rearden never produced these Maya Scripts during fact discovery. In fact, Rearden never identified these Maya Scripts in its pleadings, discovery responses, or source code production through more than five years of litigation. It also is apparent that Rearden never registered the Maya Scripts with the Copyright Office. Rearden elected to introduce this entirely new theory of DD3 infringing by copying Maya Scripts into RAM in its rebuttal technical expert report, which was served *three months* after the close of fact discovery, with summary judgment and trial on the immediate horizon. Rearden’s attempt to rely on untimely Maya Scripts as support for a new, unpleaded theory of direct infringement months after the fact discovery cut-off

---

<sup>1</sup> The parties are filing contemporaneously a stipulation to shorten the time for the briefing and hearing on this motion.

1 threatens incurable prejudice to Defendants and a massive disruption of the case management  
2 schedule.

3 Defendants have no direct knowledge of the MOVA Contour software. Rearden claims to  
4 have developed that software and at all times material to this case, the software was operated  
5 exclusively by third-party visual effects vendor DD3 in its work to develop the face of the  
6 computer generated (“CG”) Beast in *Beauty and the Beast*. Defendants therefore had to spend  
7 years and extensive resources conducting discovery to investigate and establish a record regarding  
8 the fundamental who, what, when and how concerning the direct copyright infringement theory  
9 that Rearden pleaded.

10 Defendants relied on Rearden’s stated allegations as a roadmap and conformed their  
11 discovery plan according to—and also because of—what Rearden alleged to be the copying in  
12 issue: specifically, DD3 copying the MOVA Contour software program into computer random  
13 access memory (“RAM”) at two, *and only two*, points in the facial animation process: (1) when  
14 operating the physical rig, cameras, and lights to capture the facial performance of the actor who  
15 portrayed the Beast, Dan Stevens; and (2) when processing the data from those sessions to  
16 produce output files, including most notably a “tracked mesh.” Defendants questioned multiple  
17 deponents about Rearden’s stated allegations, including who created MOVA Contour software,  
18 how it captured facial animation, how and when it processed MOVA Contour data, and the details  
19 surrounding how DD3 used the MOVA “tracked mesh” output in its visual-effects pipeline. The  
20 discovery record conclusively showed that the copying alleged by Rearden was a small and  
21 preliminary portion of a massively complex pipeline for creating the CG Beast’s face.

22 Rearden is clearly unsatisfied with what discovery revealed about MOVA Contour’s  
23 extremely limited contribution to the on-screen appearance of the Beast’s face. That is why,  
24 months after the conclusion of fact discovery, Rearden is now attempting to raise a completely  
25 different theory of infringement that alleges copying of *different* code at *different* points in the  
26 visual-effects pipeline. Rearden, through its technical expert’s *rebuttal* report, now claims for the  
27 first time that thousands of never-previously-produced animation files show that various pieces of  
28 software within “Maya Scripts” were copied into RAM *throughout* the pipeline for animating the

1 Beast's face—not just at the preliminary stage when the facial performance was captured and  
2 processed. This new infringement theory affects almost every important issue in the case,  
3 including whether there is infringement, and if so, what comprises that infringement; whether  
4 Defendants may be deemed secondarily responsible for that infringement; and, if there is liability,  
5 whether and to what extent this newly alleged infringement was responsible for any portion of the  
6 movie's profits. It is difficult to conceive of a more unfair and improper expansion of the case  
7 long after the close of fact discovery.

8       The Federal Rules do not sanction Rearden's attempt to upend the case in this manner.  
9 Under Rule 8, Rearden was required to give Defendants fair notice of what copyrighted work is at  
10 issue, and how the copyright allegedly was infringed. Under Rules 26 and 37, Rearden was  
11 required to make full disclosure of the copyrighted work that it alleged to be at issue or face the  
12 consequence of not being able to present that evidence at trial. And, under this Court's scheduling  
13 order, Rearden was required to litigate this case under the Court-ordered deadlines for fact  
14 discovery, expert discovery, and trial. Rearden did none of this with respect to its new and  
15 untimely Maya Scripts infringement theory. Courts have routinely rejected similar efforts to inject  
16 new theories in the case after discovery is closed. *See, e.g., Coleman v. Quaker Oats Co.*, 232  
17 F.3d 1271, 1292 (9th Cir. 2000). The Court should do so here.

18       Defendants move at this juncture because it is imperative that the Court and parties know  
19 now, and not weeks before trial, whether Rearden may proceed with its Maya Scripts infringement  
20 theory. Rearden's untimely disclosure of that theory affects every major remaining task between  
21 now and trial, including completing expert discovery, drafting summary judgment motions, and  
22 preparing for trial. It will significantly impact the parties' preparations, and it threatens to derail  
23 the summary judgment and trial schedules and cause Defendants to suffer massive prejudice in  
24 defending this case. Defendants respectfully request that the Court enter an order precluding  
25 Rearden from presenting evidence or argument based on this untimely theory.

**I. FACTUAL BACKGROUND**

**A. Throughout This Litigation, Rearden Has Claimed The Copyrighted Work At Issue Is The MOVA Contour Program, Not Maya Scripts**

The threshold question in any copyright case is: what is the copyrighted work? *See Feist Publ'ns, Inc. v. Rural Tel. Serv. Co.*, 499 U.S. 340, 360–61 (1991). From the date this case was filed, Rearden's pleadings have pointed to the same alleged copyrighted work: “[t]he MOVA Contour computer program.” Dkt. 1 ¶ 59 (Compl.); Dkt. 63 ¶ 61 (First Am. Compl.); Dkt. 315 ¶ 63 (Second Am. Compl.). Rearden's Certificate of Registration from the Copyright Office identifies the work as “MOVA Contour,” and says it was completed in 2009 as a work made for hire for the Rearden-controlled company OnLive, Inc. *Id.* Ex. 1 to each complaint.

Rearden originally claimed that the copyright in “MOVA Contour” included not only the computer software program but the “output” files created after an actor provides his or her facial performance. Dkt. 1 ¶¶ 42, 123, 140. Rearden alleged that Defendants directly infringed “MOVA Contour” by incorporating output files into *Beauty and the Beast*. The Court dismissed this claim, holding it was implausible “that the MOVA Contour output is created by the program without any substantial contribution from the actors or directors.” *Rearden LLC v. The Walt Disney Co.*, 293 F. Supp. 3d. 963, 970 (N.D. Cal. 2018).

Rearden amended its complaint in 2018 and in 2022. The amended complaints did not allege Defendants directly infringed Rearden's copyright. Rearden instead alleged Defendants were secondarily liable for DD3's infringement. In both amended complaints, Rearden alleged that DD3 directly infringed the copyright in the “MOVA Contour” software program by copying it into computer RAM at *only two* points in the production process: (1) when DD3 operated the physical Mova apparatus to capture an actor's facial performance; and (2) when DD3 processed the resulting data to produce output files, including the tracked mesh. Dkt. 63 ¶¶ 43, 115, 129–155; Dkt. 315 ¶¶ 45, 120, 160–186. Rearden never alleged that the “MOVA Contour” program included scripts embedded in Maya files, or that these Maya Scripts were loaded into RAM and copied throughout the facial animation pipeline whenever Maya files were opened. Indeed,

1 Rearden’s complaints have never mentioned computer “script” files or even “Maya.”<sup>2</sup> *See*  
 2 *generally* Dkt. 63; Dkt. 315.

3 **B. Throughout Fact Discovery, Rearden Said The MOVA Contour Program**  
 4 **Consisted Of Source Code Files That Rearden Produced In 2019—That**  
**Source Code Did *Not* Include Maya Scripts**

5 This case was in fact discovery for nearly five years. At no point during fact discovery did  
 6 Rearden’s discovery responses or source code production mention or include any Maya files, let  
 7 alone the newly identified Maya Scripts.

8 In 2018, Defendants asked Rearden to produce “[a]ny and all versions of the MOVA  
 9 CONTOUR SOFTWARE that DD3 allegedly infringed.” Klaus Decl. Ex. 2 (Rearden’s Response  
 10 to Request for Production No. 7, served Oct. 3, 2018) at 5. Rearden agreed to produce that  
 11 program. *Id.* Between January 15 and 17, 2019, Rearden made the source code for the MOVA  
 12 Contour program available for review by Defendants’ consulting source code expert, Dr. David  
 13 Cummings. Klaus Decl. Ex. 3. At the time of Dr. Cummings’s review, Rearden produced a  
 14 complete listing of all MOVA Contour files that comprised the program. Klaus Decl. ¶ 4. The list  
 15 of files did not include any “script” files. Klaus Decl. Ex. 3 (2019 Source Code Directory); Lane  
 16 Decl. ¶ 17. Almost all the files that Rearden produced were written in the C++ computer  
 17 language. Lane Decl. ¶ 12.

18 Moreover, and critically, Rearden never told Defendants that Maya Scripts (or any other  
 19 files) were missing from the MOVA Contour program Rearden produced in response to  
 20 Defendants’ requests. Klaus Decl. ¶ 5. Rearden’s omission to say anything about missing Maya  
 21 Scripts can only be explained by the fact that Rearden did not contend the Maya Scripts were part  
 22 of the alleged copyrighted work or that their copying constituted infringement. After all, Rearden  
 23 claims to own and know the contents of the MOVA Contour program. If Rearden believed the  
 24 Maya Scripts were part of that program, Rearden would have known they were missing and was  
 25 obligated to tell Defendants they were missing.

26  
 27  
 28 <sup>2</sup> The second amended complaint refers only to the “script” or screenplay for the film *Beauty and the Beast*. Dkt. 315 ¶ 118.

1 Rearden did nothing of the kind. Instead, Rearden's initial disclosures, served in August  
2 2018 and twice amended (most recently in March 2023), said nothing about Maya Scripts or that  
3 they were in DD3's rather than Rearden's possession (as Rearden now claims). Rearden's  
4 disclosures repeatedly identified the MOVA Contour program as a document on which it would  
5 rely, and the disclosures repeatedly represented, without qualification, that the program was in  
6 *Rearden's* possession. Klaus Decl. Ex. 10 (Plaintiffs' Initial Disclosures, served Aug. 28, 2018);  
7 Ex. 11 (Plaintiffs' Amended Initial Disclosures, served Jan. 17, 2023); *id.* Ex. 12 (Plaintiffs'  
8 Second Amended Initial Disclosures, served Mar. 28, 2023). Rearden's disclosures thus  
9 confirmed that the files Rearden produced for inspection in 2019 constituted the copyrighted work  
10 that DD3 allegedly infringed.

11 Rearden's 30(b)(6) designee, its founder and CEO Steve Perlman, likewise testified that  
12 the source code Rearden had made available for Defendants to review in 2019 was the MOVA  
13 Contour software program at issue in this case. Klaus Decl. Ex. 14 (Perlman Dep.) at 377:6–13;  
14 *see also id.* at 164:2–11 (Perlman acknowledging that "MOVA Contour software program" means  
15 "the program that Rearden claims was copied in this case").

16 Rearden also failed to raise the Maya Scripts infringement theory in response to  
17 Defendants' October 2020 "causal nexus" summary judgment motion. Defendants introduced  
18 undisputed evidence that the MOVA Contour program was not used after the tracked mesh  
19 output was delivered from DD3's "Mova" team to its visual effects team. The Darren Hendler  
20 Declaration in support of that motion stated that after MOVA Contour was used to capture and  
21 process the facial performance into a tracked mesh, "Mova software was not used at any other  
22 point in the process of creating the Beast." Dkt. 249-4 ¶ 16. Mr. Hendler's declaration further  
23 described in detail the numerous additional steps that were necessary to animate the Beast after the  
24 handoff of the tracked mesh output file. *Id.* ¶¶ 21–47. Rearden did not submit any evidence  
25 contesting these or any other factual statements in the Hendler declaration.

**C. Rearden’s Technical Expert Reports—Served Months After The Close Of Fact Discovery—Attempt To Expand The Scope Of Software That Constitutes The Copyrighted Work And How It Was Infringed**

By the time that fact discovery closed on March 2, 2023, Dkt. 313,<sup>3</sup> Defendants had collected evidence showing precisely how the MOVA Contour program was used only in the earliest stages of the process of developing the CG Beast’s face, and that the program’s operation only minimally impacted the on-screen appearance of the Beast’s face. Discovery established that intervening steps caused much of the nuance from the facial-captured data to be lost. Discovery further established that thousands of hours of work by numerous artists, using many different technologies, were required to convert the mask-like tracked mesh rendering of Dan Stevens’s facial motions into a Beast with a totally different facial structure, a heavy groom of hair, expressive eyes and mouth, skin, and other features that brought the Beast to life. *See generally* Lane Decl. Ex. B (Lane Opening Rep.).

Months after fact discovery was closed, and while expert discovery was well underway, Rearden attempted to obfuscate MOVA Contour’s limited capabilities and disclosed for the first time its new theory that the alleged copyright infringement included DD3 copying Maya Scripts into RAM throughout the facial animation pipeline. Maya is a computer graphics application that was used (among numerous other tools) for many tasks in the laborious process to further develop the tracked mesh MOVA output into the CG Beast that audiences see on the screen. Lane Decl. ¶ 13. Maya is not owned by Rearden; it was developed and is owned by Autodesk, a third party. *Id.*

Maya .ma animation files are project files that contain art assets, and these files are typically created, edited, and executed to produce 3D graphics content. *Id.* ¶ 14. An example of a Maya animation file is shown below.

<sup>3</sup> By agreement of the parties, a small number of depositions took place after the fact discovery cut-off. The last deposition concluded on April 18, 2023. Klaus Decl. ¶ 17.

15 *Id.* ¶ 24. Maya users may also use scripts, written in Maya Embedded Language (“MEL”) or  
16 Python, to automate repetitive tasks, customize the software, and extend its functionality. *Id.*  
17 ¶ 19.<sup>4</sup>

18 In his reports, Rearden’s technical expert, Alberto Menache, advanced a theory that the  
19 Maya Scripts are also part of the MOVA Contour software program, and (in his rebuttal report)  
20 that DD3’s copying of the scripts within these animation files also constituted infringement.

21 Mr. Menache’s opening report, served on April 20, 2023 (*seven weeks* after the fact  
22 discovery cut-off), generically asserts that Rearden developed Maya Scripts, and that the Maya  
23 scripts are copied into RAM when an animation file is opened in Maya. Klaus Decl. Ex. 15  
24 (Menache Opening Rep.) at 16, 18. Notably, however, Mr. Menache’s opening report does *not*  
25 opine that any Maya Scripts were actually copied into RAM or used in connection with *Beauty*  
26

27 \_\_\_\_\_  
28 <sup>4</sup> MEL scripts can be saved out and stored in files with a .mel extension, and Python scripts can be  
saved out and stored in files with a .py extension. Lane Decl. ¶ 15. MEL scripts may also be  
embedded within a Maya .ma animation file. *Id.* ¶ 21.

1 *and the Beast*. Rearden waited to introduce this theory of infringement until June 1, 2023, *three*  
 2 *months* after the discovery cut-off, when Rearden served Mr. Menache’s rebuttal report. There,  
 3 and for the very first time, Rearden alleged that DD3 caused Rearden’s Maya Scripts to be copied  
 4 into RAM throughout the animation pipeline during DD3’s work on *Beauty and the Beast*.  
 5 Specifically, Mr. Menache asserts:

6 All of the [DD3 visual effects] teams that accessed the Maya animation files for  
 7 any work after the tracked mesh was ingested, potentially including simulation,  
 8 lighting, and others, loaded MOVA software into the random access memory  
 9 (‘RAM’) of their workstations when they opened Beast animation files containing  
 10 ingested MOVA Contour tracked mesh.

11 Klaus Decl. Ex. 16 (Menache Rebuttal Rep.) at 30. Mr. Menache further asserts that there is “[n]o  
 12 clear demarcation between Mova Contour capture/processing”—Rearden’s theory of infringement  
 13 throughout fact discovery—“and other steps in the animation pipeline.” *Id.* at 32.

14 During the expert discovery period, and after Mr. Menache’s opening report, Defendants  
 15 asked Rearden to make available the source code for the Mova Contour software program for  
 16 Defendants’ new technical expert, Dr. Stephen Lane, to review. Klaus Decl. ¶ 6. Rearden  
 17 permitted Dr. Lane to conduct a time-limited review, in counsel’s office on a restricted computer.  
 18 *Id.* ¶ 7; Lane Decl. ¶¶ 9–11.

19 The production that Dr. Lane reviewed consisted of two tranches of files. First, Rearden  
 20 re-produced the same original source code repository that it had produced in 2019. Klaus Decl.  
 21 Ex. 5 (5/11/23 Email from Mr. Carlson) (indicating that source code files were “same as 2019”).  
 22 Second, Rearden *added* more than 2,500 Maya (.ma) animation files that Rearden said had been  
 23 “returned” by DisputeSoft/DD3 through the *SHST* asset return process, to which Disney is not a  
 24 party. Lane Decl. ¶ 10; Klaus Decl. Ex. 17 (6/7/23 Correspondence); *id.* Ex. 8 (3/23/23 Asset  
 25 Return Production); *id.* Ex. 9 (4/7/23 Asset Return Production). Based on Dr. Lane’s review, the  
 26 Maya files contained scripts, none of which are included in the MOVA Contour software program  
 27 that Rearden originally produced in 2019. *See* Lane Decl. ¶ 17. Dr. Lane’s review further  
 28 confirmed that the MOVA software code that operates to capture the facial performance and

1 process the MOVA output files is *not* the same code in the Maya Scripts that Rearden’s expert,  
 2 Mr. Menache, now claims was copied when animators did their work using Maya. *See id.* ¶ 22.

3 **II. RULE 8 BARS REARDEN FROM PURSUING ITS UNALLEGED NEW MAYA**  
 4 **SCRIPTS INFRINGEMENT THEORY AT TRIAL**

5 “Federal Rule of Civil Procedure 8(a)(2) requires that the allegations in the complaint ‘give  
 6 the defendant fair notice of what the plaintiff’s claim is and the grounds upon which it rests.’”  
 7 *Pickern v. Pier 1 Imports (U.S.), Inc.*, 457 F.3d 963, 968 (9th Cir. 2006) (quoting *Swierkiewicz v.*  
 8 *Sorema N.A.*, 534 U.S. 506, 512 (2002)). In accordance with this fair notice requirement, where a  
 9 plaintiff asserts a new, unpleaded liability theory after the fact discovery deadline, courts preclude  
 10 plaintiffs from asserting the new theory at trial pursuant to Federal Rule of Evidence 402 and  
 11 Federal Rule of Civil Procedure 15. *See, e.g., Amini Innovation Corp. v. Anthony Cal. Inc.*, No.  
 12 CV 03-8749, 2006 WL 6855371, at \*9–10 (C.D. Cal. Sept. 21, 2006) (granting motion in limine  
 13 where plaintiff sought to pursue new theory of copyright infringement liability at trial); *Glob.*  
 14 *Apogee v. Sugarfina, Inc.*, No. CV 18-05162-PSG-E, 2023 WL 3235934, at \*3 n.2 (C.D. Cal. Mar.  
 15 31, 2023) (precluding plaintiff from asserting new infringement period and theory of infringement  
 16 where plaintiff failed to comply with Rule 8’s notice pleading requirements); *Giddings v. Vision*  
 17 *House Prod., Inc.*, 584 F. Supp. 2d 1222, 1224–26 (D. Ariz. 2008) (finding plaintiff was precluded  
 18 from asserting new moral rights theory of infringement, which was not alleged in complaint, after  
 19 the discovery deadline had passed); *Reilly v. Wozniak*, No. CV-18-03775-PHX-MTL, 2021 WL  
 20 2138780, at \*3 (D. Ariz. May 26, 2021) (granting motion in limine to preclude plaintiff from  
 21 presenting argument and evidence on contributory and vicarious infringement theories because  
 22 “Plaintiff did not assert these claims in his complaint, nor did he seek to amend his complaint to  
 23 include them” and “[o]nly now, at the eve of trial, has Plaintiff indicated that these claims will go  
 24 forward”).

25 Consistent with this authority, courts have refused to allow plaintiffs to insert late in the  
 26 case new infringement claims based on later, unregistered versions of source code that has been  
 27 the subject of prior copyright registrations. *See, e.g., Airframe Sys., Inc. v. L-3 Commc’ns Corp.*,  
 28 658 F.3d 100, 104–07 (1st Cir. 2011) (affirming grant of summary judgment where plaintiff

1 “ha[d] not produced the relevant source code”; evidence supporting infringement of 2009 version  
 2 of plaintiff’s source code was insufficient to show that its earlier registered versions were  
 3 infringed, absent showing that they were substantially similar to allegedly infringing program  
 4 (citation omitted)); *see also Antonick v. Electronic Arts, Inc.*, 841 F.3d 1062, 1066 (9th Cir. 2016)  
 5 (rejecting infringement claim where plaintiff failed to introduce source code to permit substantial  
 6 similarity analysis).

7 **A. Rearden Failed To Provide Timely Or Fair Notice Of Its Maya Scripts**  
 8 **Infringement Theory**

9 As discussed, Rearden’s Maya Scripts infringement theory is not stated anywhere in any  
 10 complaint in this case. In its first and second amended complaints, Rearden alleged that DD3  
 11 infringed the copyright in the MOVA Contour program (1) when DD3 operated the physical  
 12 MOVA apparatus to capture an actor’s facial performance and (2) when DD3 processed the  
 13 images to produce the “track[ed] mesh” output file. Dkt. 63 ¶¶ 43, 115, 129; Dkt. 315 ¶¶ 45, 120,  
 14 160. Nowhere did Rearden allege that further infringement occurred *after* the tracked mesh output  
 15 file had been produced, and whenever DD3 visual effects artists opened Maya animation files  
 16 containing the scripts that Rearden only now claims are part of the MOVA Contour program. If,  
 17 as Rearden now claims, it intended to assert its Maya Scripts infringement theory earlier in the  
 18 case, then Rearden should have amended its complaint to state that explicitly. Had Rearden done  
 19 that, the parties could have engaged in motion practice and fact discovery.

20 But Rearden did not seek to amend its complaint. Nor did it produce any scripts when  
 21 producing its entire repository of MOVA Contour source code in 2019. Klaus Decl. ¶ 9; Lane  
 22 Decl. ¶ 17. Additionally, while Rearden now claims that it did not have the Maya Scripts because  
 23 they were in DD3’s possession, Rearden did not tell Defendants that its 2019 source code  
 24 production was incomplete. Klaus Decl. ¶ 9. On the contrary, Rearden has always indicated the  
 25 MOVA Contour source code was entirely in its possession. Klaus Decl. Exs. 10–12 (Initial  
 26 Disclosures).

27 Rearden also cannot claim it provided fair notice that the scripts were part of the allegedly  
 28 infringed copyrighted work through its expert reports. Disclosure in an expert’s report served

1 after the close of fact discovery is not sufficient. *Pickern*, 457 F.3d at 969 (“[B]ecause the  
 2 expert’s report was not filed and served until after the discovery deadline, that report cannot be  
 3 construed as notice that would prompt the [defendants] to seek discovery regarding the new  
 4 allegations.”).

5 During pre-motion meet-and-confer discussions, Rearden claimed it had informally  
 6 disclosed the Maya Scripts infringement theory by asking questions about “scripts” at the  
 7 depositions of Steve Perlman (on March 6, 2023, after the fact discovery cut-off) and Darren  
 8 Hendler (on February 16, 2023). This claim is baseless. Vague questions at a deposition do not  
 9 provide notice of a completely new infringement theory, nor do they amend Rearden’s existing  
 10 discovery responses or complaint. Even if those questions were deemed to provide some inkling  
 11 that Rearden was considering a new Maya Scripts infringement theory, that would not excuse  
 12 Rearden’s failure to allege that theory expressly. On the contrary, if Rearden knew at Mr.  
 13 Hendler’s February 16, 2023 deposition that it intended to press a new infringement theory based  
 14 on the Maya Scripts, Rearden had both the time and opportunity after Mr. Hendler’s deposition to  
 15 seek to amend its complaint before the fact discovery cut-off. *See Amini*, 2006 WL 6855371, at  
 16 \*10 (finding that even “if Plaintiff indeed gave notice informally . . . about its plan to pursue an  
 17 additional legal theory, then Plaintiff had the opportunity” to take action such that “Defendants  
 18 could be certain about the need to re-open discovery”). Rearden did not seek to amend its  
 19 complaint.

20 **B. Defendants Will Be Severely Prejudiced If Rearden Is Permitted To Proceed**  
 21 **With A New, Unpleaded Maya Scripts Infringement Theory After The Close**  
**Of Fact Discovery**

22 Rearden’s failure to provide fair notice prejudices Defendants. The “complaint guides the  
 23 parties’ discovery, putting the defendant on notice of the evidence it needs to adduce in order to  
 24 defend against the plaintiff’s allegations.” *Coleman*, 232 F.3d at 1292. “The lack of notice”  
 25 concerning a particular theory of liability “makes it difficult, if not impossible, for [the defendant]  
 26 to know how to defend itself.” *Id.* This is particularly true where the plaintiff asserts a new  
 27 infringement theory or type of copyrighted work, since determining what comprises the  
 28 protectable elements of the copyrighted work is the foundation of an infringement claim. *Feist*,

1 499 U.S. at 361 (copyright infringement claim requires proof of “copying of constituent elements  
2 of the work that are original”); *Apple Computer, Inc. v. Microsoft Corp.*, 35 F.3d 1435, 1443 (9th  
3 Cir. 1994) (distinguishing between licensed and unlicensed elements of the software to determine  
4 whether there was copying).

5 Courts have repeatedly found that defendants are prejudiced where a plaintiff belatedly  
6 asserts new elements or aspects of the copyrighted work. *See, e.g., Amini Innovation Corp.*, 2006  
7 WL 6855371, at \*9–10; *Glob. Apogee*, 2023 WL 3235934, at \*3 n.2; *Giddings*, 584 F. Supp. 2d at  
8 1224–26. For example, the plaintiff in *Amini Innovation Corp.* originally pursued a copyright  
9 infringement claim based on its registered copyright. 2006 WL 6855371, at \*9–10. Before trial,  
10 the plaintiff also sought to pursue a new legal theory of copyright infringement liability based on a  
11 compilation copyright. *Id.* This theory was not alleged in the complaint and not covered by the  
12 copyright registrations. *Id.* at \*10. The court therefore precluded the plaintiff from pursuing this  
13 new theory, reasoning that the compilation copyrights were “sufficiently different that substantial  
14 preparation would be required to defend against” it and that defendants “[would] be prejudiced if  
15 [the plaintiff was] allowed to pursue a new theory of liability.” *Id.* at \*9–10.

16 Here, Defendants will be severely prejudiced if Rearden is permitted to pursue its untimely  
17 Maya Scripts infringement theory. For years, the parties have been litigating this case based on a  
18 shared understanding that the MOVA Contour software program at issue was embodied in the  
19 source code production that Rearden made in 2019—a production that did not include the Maya  
20 Scripts that Rearden is now attempting to assert were infringed. And the parties have been  
21 litigating this case—and taking third-party discovery—based on the understanding that the alleged  
22 copying of that software program occurred when the facial performance was captured and the data  
23 was processed into MOVA output files—not after that point.

24 Rearden’s attempt to inject a new infringement theory into the case has deprived  
25 Defendants of the ability to conduct discovery and build a record addressing the fundamental  
26 questions of the who, what, when, and how of infringement. Defendants had no knowledge of the  
27 MOVA Contour program’s operation before this case started or how exactly the program was used  
28 by DD3. Guided by the allegations in the complaint, Defendants have spent years discovering

1 who operated the software, when the software was copied into RAM, and what it did. This case  
 2 has included 41 depositions, and the production of more than 250,000 pages of documents. Klaus  
 3 Decl. ¶ 15. The record compiled through years of discovery shows that MOVA Contour was  
 4 copied into RAM and its programs executed only at the earliest stages of the facial motion capture  
 5 process.

6 Through its post-eleventh-hour attempt to expand what constitutes the copyrighted work  
 7 and how it was infringed, Rearden is trying to present a different record concerning different  
 8 infringement occurring throughout the facial animation pipeline. Rearden's attempt to inject a  
 9 new infringement theory has deprived Defendants of the opportunity to take discovery on multiple  
 10 issues, including:

- 11 • *What the scripts are.* Rearden has not provided any listing of the Maya Scripts it claims to  
 12 be part of the MOVA Contour software program. Klaus Decl. ¶ 10; Lane Decl. ¶ 30.  
 13 Defendants therefore cannot determine which of the dozens of scripts contained in the  
 14 Maya animation files are allegedly infringing. *Id.*
- 15 • *Whether the scripts are protectable.* Rearden's late disclosure has prevented Defendants  
 16 from pursuing discovery on whether the scripts, which are written in the Maya program  
 17 using the Autodesk's proprietary MEL language, are even protectable expression.
- 18 • *Who owns copyright in the scripts.* Rearden's late disclosure has prevented Defendants  
 19 from pursuing discovery on whether Autodesk, DD3, or any other parties own copyright in  
 20 the scripts. For example, DD3 obtained possession of the MOVA Contour software in or  
 21 about May 2013, and the earliest date modified for any Maya animation file produced is  
 22 July 24, 2013. Klaus Decl. ¶ 9; Lane Decl. ¶ 29. Based on the Maya animation files alone,  
 23 Defendants therefore cannot determine which scripts were written by Autodesk, DD3, or  
 24 Rearden. Moreover, the number of scripts in each Maya animation file varies over time,  
 25 indicating that Maya Scripts changed while the MOVA technology was being used at  
 26 DD3, from 2013 forward. Lane Decl. ¶¶ 27–29. With fact discovery closed, Defendants  
 27 cannot obtain evidence to further support this defense.

- 1 • *Whether the scripts were part of the work that Rearden registered with the Copyright*  
2 *Office.* Rearden has never disclosed what source code it deposited with the Copyright  
3 Office. If the Maya Scripts were not deposited with the Copyright Office (as appears  
4 almost certainly to be the case), or if Rearden did not tell the Copyright Office that it  
5 claimed the Maya Scripts were to be included in the deposited work but were in the  
6 possession of a third party, then the Maya Scripts are not part of the work covered by  
7 Rearden’s registration.<sup>5</sup> Moreover, it is impossible to square Rearden’s new claim that the  
8 Maya Scripts are part of the “MOVA Contour” represented to have been completed in  
9 2009 with even the limited evidence showing that Maya Scripts continued to be written  
10 and deleted from 2013 forward. *Compare* Dkt. 315 ¶ 45, *with* Lane Decl. ¶¶ 27–29.
- 11 • *Whether the scripts were copied in connection with Beauty and the Beast.* Defendants  
12 have been unable to pursue full discovery on whether the Maya Scripts were actually  
13 copied in connection with DD3’s work on *Beauty and the Beast*. For example, some of the  
14 produced Maya animation files appear to relate to projects or films other than *Beauty and*  
15 *the Beast*. Lane Decl. ¶ 22. The files also lack complete metadata, such as when they  
16 were opened, closed, or created, as would be necessary to determine whether any copying  
17 occurred. *Id.* ¶ 29. Defendants have also been unable to review DD3’s records to  
18 determine whether these scripts were copied after the tracked mesh output files were  
19 provided to the visual effects team. The limited available evidence suggests, in fact, that  
20 that DD3 had a practice of sending files to downstream teams in the animation pipeline  
21 that did not include scripts. *See* Klaus Decl. Ex. 13 (Hendler Dep.) at 218:18–21  
22 (deposition testimony that a script “would only have been stored in that file until the first  
23 publish process, by which stage that would have been scraped out as it was handed off to  
24 downstream teams”). But Rearden’s late disclosure has prevented Defendants from fully  
25 developing the facts relevant to this issue.

---

26  
27  
28 <sup>5</sup> Only the registered work may form the basis of a copyright infringement claim. 17 U.S.C.  
§ 411.

- *Whether the scripts were used after the tracked mesh was delivered to the DD3 visual effects team.* Defendants have been unable to conduct depositions of third-party witnesses at DD3 regarding if, how, when, and for what purpose they used the Maya Scripts, and what the Maya Scripts actually contributed to the Beast’s final appearance or to the film’s profits—if anything.

These fact questions—now unanswerable—go to every significant liability and damages issue in the case, including whether there was infringement, whether Defendants can be held responsible for it, and whether (and if so to what extent) the alleged script copying had any causal nexus to the movies’ profits.

It does not cure this prejudice that Rearden made certain Maya files available for Defendants’ expert to review for a three-day period in May 2023 after Defendants requested an opportunity to review the source code repository. There were more than 2,500 Maya files. *See* Lane Decl. ¶ 10. Defendants could not fully examine these files in just the three days that Rearden made them available; nor could Defendants do any other discovery related to what the scripts are, what they do, who owns them, whether or how they were used or copied in connection with *Beauty and the Beast*, when they were used or copied, and for what purpose.

The prejudice to Defendants from Rearden’s new infringement theory is manifest.

### **III. RULES 26 AND 37 BAR REARDEN FROM OFFERING UNDISCLOSED EVIDENCE ON ITS NEW MAYA SCRIPTS INFRINGEMENT THEORY**

Preclusion is also warranted under Federal Rules of Civil Procedure 26 and 37.

Federal Rule of Civil Procedure 26 requires Rearden to provide “a description by category and location . . . of all documents . . . that the disclosing party has in its possession, custody, or control and may use to support its claims or defenses.” Fed. R. Civ. P. 26(a)(1)(A)(ii). Rule 26 also requires Rearden to supplement its response to a request for production “in a timely manner if [Rearden] learns that in some material respect the disclosure or response is incomplete or in correct, and if the additional or corrective information has not otherwise been made known to the other parties during the discovery process or in writing.” Fed. R. Civ. P. 26(1)(A). Rule 26 further requires that Rearden provide an opening expert report that contains “a complete statement

1 of all opinions the witness will express and the basis and reasons for them” at the time ordered by  
 2 the Court. Fed. R. Civ. P. 26(a)(2)(B)(i), (D)

3 Rearden failed to comply with Rule 26 by failing to timely disclose the location of alleged  
 4 elements of the copyrighted work and to supplement its response to Request for Production No. 7.  
 5 To date, Rearden has consistently represented in its initial disclosures that the “Contour program  
 6 source code” was in the possession of “Rearden LLC.” *See* Klaus Decl. Exs. 10–12 (Initial  
 7 Disclosures). It never described the source code in Rearden’s possession as only a *portion* of the  
 8 entire alleged copyrighted work. Klaus Decl. ¶ 5. Similarly, in response to Defendants’ Request  
 9 for Production No. 7, Rearden agreed to produce copies of “[a]ny and all versions of the MOVA  
 10 CONTOUR SOFTWARE from the date of conception to the present.” Klaus Decl. Ex. 2  
 11 (Rearden’s Response to Request for Production No. 7, served Oct. 3, 2018) at 5. Rearden made  
 12 that source code available in January 2019. Klaus Decl. ¶ 4. Since then, Rearden has never  
 13 updated its response to disclose that its January 2019 production was incomplete, and that Rearden  
 14 also contended that Maya Scripts were part of the “MOVA CONTOUR SOFTWARE.” *Id.* ¶ 5;  
 15 *see also* Klaus Decl. Ex. 1 (Defendants’ Requests for Production) at 2 (defining “MOVA  
 16 CONTOUR SOFTWARE” as “the computer software program, including without limitation  
 17 source code, that is the subject of the COMPLAINTS”).

18 Rearden also failed to comply with Rule 26 by not properly disclosing that Mr. Menache  
 19 would express the opinion that DD3 infringed Maya Scripts whenever DD3 employees opened  
 20 Maya animation files in their work on *Beauty and the Beast*. The Court’s scheduling order  
 21 required parties to serve their opening expert reports “on all other issues unrelated to damages” by  
 22 April 20, 2023. Dkt. 368 at 2. Mr. Menache offered no opinions regarding any alleged copying in  
 23 connection with *Beauty and the Beast* in his opening report. *See* Klaus Decl. Ex. 15 (Menache  
 24 Opening Rep.). With respect to Maya Scripts, Mr. Menache only stated generically that when a  
 25 Maya animation file is opened, a script can be copied into RAM. *See id.* at 16, 18. He never  
 26 connected this statement in any way to *Beauty and the Beast*. Rearden’s failure to disclose all of  
 27 Mr. Menache’s opinions in his opening report violates Rule 26(a). *See Cyberian v. M.M. Primas*  
 28 *Grp. Inc.*, No. SACV 08-01019 JVS (MLGx), 2010 WL 11507802, at \*7 (C.D. Cal. Dec. 22,

2010) (precluding expert testimony where the expert was not timely identified as an expert infringement witness); *see also Pineda v. City & Cnty. of S.F.*, 280 F.R.D. 517, 520 (N.D. Cal. 2012) (expert’s report violated Rule 26 where it did not contain opinions that were “properly and thoroughly set forth and supported”); *Jackson v. United States*, No. C 05-3006 MHP, 2007 WL 4532223, at \*4–5 (N.D. Cal. Dec. 19, 2007) (finding cursory and incomplete expert report did not meet requirements of Rule 26(a)(2)(B), which provides that “an expert’s report must be ‘detailed and complete’ in order ‘to avoid the disclosure of “sketchy and vague” expert information”” (citation omitted)).

Under Rule 37, Rearden is “not allowed to use” information that it failed to timely disclose “to supply evidence . . . at a trial, unless the failure was substantially justified or is harmless.” Fed. R. Civ. P. 37(c)(1). Rule 37 “gives teeth to [Rule 26’s] requirements by forbidding the use at trial of any information . . . that is not properly disclosed.” *Yeti by Molly, Ltd. v. Deckers Outdoor Corp.*, 259 F.3d 1101, 1106 (9th Cir. 2001) (only two “exceptions ameliorate the harshness of Rule 37(c)(1): The information may be introduced if the parties’ failure to disclose the required information is substantially justified or harmless”).

For reasons set forth above, Rearden’s failure to timely disclose its theory is not harmless. *See* Section II.B, *supra*. Nor is it substantially justified. During the meet-and-confer process, Rearden previewed its excuses for not disclosing its Maya Scripts infringement theory while fact discovery remained open. None of Rearden’s excuses justify, much less excuse, its untimely disclosure.

First, Rearden claimed that it was not asserting a new theory of infringement, because it has previously claimed its alleged copyright in the MOVA Contour software program is infringed whenever DD3 copied code from that program into RAM. Klaus Decl. Ex. 17 (6/7/23 Correspondence). Rearden has not shown, and cannot show, that its complaints alleged that scripts allegedly embedded in Maya animation files were part of the copyrighted work, or that such scripts were copied into RAM when those files were opened by DD3.

Second, Rearden claimed that it “did not describe all of the means by which MOVA Contour software code was copied from NVM to RAM in response to a discovery request because

1 no discovery request asked [Rearden] to do so.” Klaus Decl. Ex. 17 (6/7/23 Correspondence).  
2 This response ignores Defendants’ 2018 request that asked Rearden to produce all versions of the  
3 alleged copyrighted work, and the fact that Rearden did not include the scripts or otherwise  
4 represent that any components were missing when Rearden made the MOVA Contour program  
5 available for Defendants’ expert to review in 2019. *See* Klaus Decl. ¶¶ 4–5 & Ex. 2 (Rearden’s  
6 Response to Request for Production No. 7, served Oct. 3, 2018) at 5.

7         If the Maya Scripts actually were part of the MOVA Contour software program, Rearden  
8 should have known they were not in the source code that it produced in 2019 or that it registered  
9 with the Copyright Office. Rearden should have disclosed that Maya Script files were missing  
10 from its production of the program and that Rearden needed to obtain them from DD3. Rearden  
11 did not do that. Klaus Decl. ¶ 5. On the contrary, Rearden’s disclosures always stated plainly that  
12 the Maya Contour program—the alleged copyrighted work—was in Rearden’s possession. *See*  
13 Klaus Decl. Exs. 10–12 (Initial Disclosures).

14         Third, Rearden blamed the late production of the Maya animation files on DD3 and the  
15 asset-return process in *SHST*. Klaus Decl. Ex. 6 (5/11/23 Email from Mr. Carlson). This belated  
16 attempt at finger-pointing is specious. The *SHST* litigation and asset-return process is a separate  
17 proceeding. If Rearden thought the Maya Scripts were relevant to *this* litigation, it should have  
18 sought them in *this* litigation while fact discovery was still open. Notably, Rearden served  
19 subpoenas on DD3 on June 22, 2018 (over five years ago) and again on January 5, 2023. If  
20 Rearden believed that the Maya Scripts were responsive to those subpoenas and relevant to this  
21 litigation, Rearden should have moved to compel their production *before* fact discovery closed.  
22 *See Davis v. Pinterest, Inc.*, 601 F. Supp. 3d 514, 525–27 (N.D. Cal. 2022) (untimely disclosure  
23 was not substantially justified where the plaintiff “chose to wait so long to obtain the information  
24 he needed for his case” and failed to move to compel). Instead, Rearden chose to obtain the files  
25 through the *SHST* asset-return process to which Defendants are not parties, which meant  
26 Defendants were in the dark about both the files being returned and Rearden’s reasons for seeking  
27 them. To the extent that Rearden intended to rely on scripts in Maya animation files from the  
28 asset return process to support its infringement claim, Rearden was obligated to timely supplement

1 its disclosures to identify the existence of these files to Defendants. Fed. R. Civ. P. 26(e)(1)(A).  
2 Had Rearden complied with its obligations under the Rules, the parties could have accounted for  
3 the need for discovery on these files in the case schedule. Rearden failed to do so. And its failure  
4 to timely produce the Maya Scripts and also its failure to properly disclose the Maya Script  
5 infringement theory necessarily precludes Rearden from relying on that theory for the first time in  
6 its rebuttal expert report.

### 7 CONCLUSION

8 For the reasons set forth above, the Court should preclude Rearden from introducing  
9 evidence or argument related to Rearden's new, unpleaded theory of copyright infringement based  
10 on the Maya Scripts.
